

KTD-447

CPU Card, Master Switcher Control Card

Overview

The black-color coded CPU card provides the master switcher chassis with switching control for 32 monitor outputs. Nonvolatile RAM holds user-programmable data. The KTD-447 also provides a keyboard port and an RS232 port for uploading and downloading programming information with the use of GE Security software. Built-in diagnostic LEDs indicate when the card is powered and processing, the data rate of RS232 serial communication, video sync detection and functionality of Digiplex PS422 control communication.
