

KTD-444

Monitor Output Card, Controls 4 Monitor Outputs

The blue colour-coded monitor output card generates alphanumeric titles for four monitors. It also provides built-in diagnostic LEDs, which indicate communications between the CPU card and the monitor. The LEDs indicate the functional mode of each monitor as well as the receipt of control data by the corresponding monitor. The master chassis accepts up to eight KTD-444 Monitor Output Cards, making it possible to generate titles for 32 monitors. Each output drives a 75 ohm load.
