

PCC-Config

KSA701/FP1500 Configuration software kit

General

PCC-Config allows easy, menu driven, programming of all the features and settings of the panel. Common texts can be easily copied to sensors and zones. Programming becomes simple as all settings are displayed for the programmers convenience.

The Kit

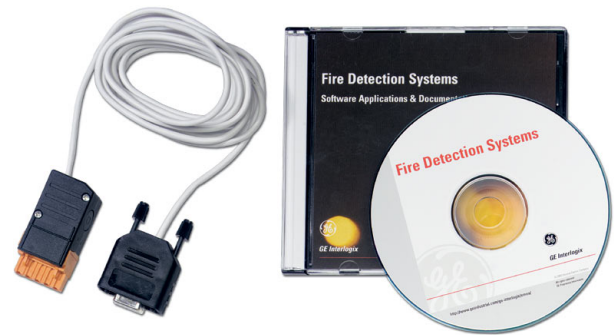

PCC-Config is supplied as a kit that includes the installation CD with the software together with all the relevant documentation and manuals, as well as the RS232 interface cable between a standard IBM compatible 9-pin RS232 PC port and the fire panel.

User Friendly

PCC-Config is a multi-lingual application that provides for an interface between the fire panel and the user. It allows the user the configure, save, up and download the entire fire panel configuration or parts as it is required. This up/downloading is not only possible locally i.e. when connected to the panel directly, but is even possible via the fire panel network, via a standard or GSM telephone network, or via TCP/IP from remote locations.

Hardware Requirements

PCC-Config is not PC hardware intensive. It can be used on any platform capable of supporting the conforming Windows operating system. Refer to the technical requirements overleaf.

Standard Features

- **Windows based**
- **Complete external configuration of the installation**
- **Configuration possibilities for single and networked fire systems**
- **Local or remote operation via modem or TCP/IP**
- **Standard RS232 communication**

PCC-Config

KSA701/FP1500 Configuration software kit

Specifications

Hardware requirements

Communication	RS232, modem and/or TCP/IP
Display	VGA or higher resolution
Hard disk	2 Gb with 650 Mb free space
Keyboard	Required
Pointing device	Required
Printer	System printer required for printing
Processor	133 MHz or higher Pentium-compatible CPU
RAM	64 Mb or more
Removable media	1.44 Mb stiffer and CD-ROM or DVD drive

Software requirements

Operating system	Win '98, Win 2000, Win XP
------------------	---------------------------
