

PCC2000*Programming and configuration software*

This software package allows easy, menu driven, programming of all the panel's features and settings. Common texts can be easily copied while sensors, zones and areas increment or follow automatically. Boolean logic programming becomes simple as inputs and outputs are continuously displayed for the programmer's convenience.

***Standard Features***

- **Provide communication with single fire panels and networked fire systems, both locally or remote via modem**
- **Windows 95 and NT compatible**
- **For use with FP2000, FP1200**
- **Menu driven**
- **Full or partial up- and download**
- **Dynamic Link Library (DLL) for third party integration**

PCC2000

Programming and configuration software

Specifications

Processor	486 66 MHz
RAM	12 Mb
Display adapter	VGA
Hard disk space	20 MB
Pointing device	MS Mouse, etc.
Graphical environment	Windows 95
Communications ports	1 x RS-232
	1 parallel
